

**Trauma care doesn't stop  
at the ED doors**

**Why should  
trauma education?**

**The trauma  
nursing course that starts . . .  
Where the other courses end**

### **Target Audience**

This course is designed to give pediatric nurses who work in acute care, critical care, and perioperative areas the foundational, evidence-based information and critical thinking skills necessary to care for the hospitalized trauma child. PCAR covers a wide range of pathophysiologic and nursing concepts and is designed to be a broad, core-level program, rather than an advanced or specialty area-specific course.

### **Course Content**

**Day 1** is an introduction to basic topics relevant to the nursing care of the hospitalized injured child:

- The trauma continuum of care
- The biomechanics of trauma
- The body's response to injury
- Assessment of the injured inpatient
- Caring for the patient in shock

**Day 2** Learners participate in guided, interactive case studies that address the care of hospitalized children with injuries to various body regions. Each module is designed to introduce specific trauma care concepts including pathophysiology, assessment modalities, and complications. Surgical, medical, and nursing management options and outcome criteria are presented while discussing patients with:

- Thoracic trauma
- Abdominal trauma
- Musculoskeletal trauma
- Brain trauma
- Spinal cord trauma
